# DISCLAIMER ON LIMITATION OF LIABILITY

**These internal working materials are exclusively intended for informative purposes**

In particular, the enclosed information should not be considered as a financial, commercial, investment, legal or any other type of proposal or offer. This information should also not be taken as a call-to-action or an urge to utilize the described services. Any decisions on the use of these materials should be made independently.

## Minting of Coins and Token

Through a so-called minting (technical process), via delivered hardware or hardware which is maintained and serviced for the user in the course of a so-called "In-house Minting", users have the opportunity to mint coins. No liability or guarantees can be assumed for the price development of these coins on crypto exchanges, as price developments of cryptocurrencies are dependent on multiple market influences.

## Time Halving & Sales Halving

With a so-called time halving & sales halving, the total number of minted coins can differ from masternode to masternode (hardware / processor for minting coins). Basically, the later a masternode is activated for the minting process, the lower the total number of minted coins. Therefore, before you consider a possible purchase of a masternode, check whether the number of coins still to be minted by this is fair to your decision.

Cryptocurrency trading is inevitably linked with certain risks, highly speculative, and may lead to partial or total losses in the prices of cryptocurrencies at your disposal.

We strongly recommend you to make informed decisions on trading, investing or exchanging cryptocurrencies, relying on professional consultations as needed. Make sure to verify the services offered by the companies indicated in these materials before using their products - installing, registering, purchasing, or using these products for trade and investment purposes.

Please note that the information contained in this presentation is subject to change, which means that important aspects of the project can be changed or abandoned at any time.

## Staking

So-called staking promotions represent blockchain and crypto projects whose indicators allow a high probability of success. However, since these are third-party projects, SAFIR is not responsible for the respective project itself, nor does SAFIR have any influence on whether the respective project is successfully implemented or not.

Therefore, no guarantees or promises can be made. We therefore strongly recommend that you inform yourself independently and on your own responsibility before making any decision in this regard.

## Forecast

Forecasts are based on previous developments. These therefore do not represent any promises or guarantees.

Changing market conditions or unforeseeable events which are outside of the company's own degree of effectiveness can influence future developments to a small or large extent.

# RISK ASSOCIATED WITH CRYPTOASSETS

Things to know before buying cryptoassets or related products and services

## Extreme Price Fluctuations

Many cryptoassets suffer from sudden and extreme price fluctuations and are speculative in nature, as their price is often based solely on consumer demand (i.e.. there may be no asset backing the project or other tangible value).

You can lose a large amount of money or even all the money you have invested. Extreme price fluctuations also make many cryptoassets unsuitable as a store of value or as a medium of exchange or payment.

## Misleading Information

Some cryptoassets and related products are advertised to the public in an aggressive manner, using marketing material and other information that may be unclear, incomplete. inaccurate or even deliberately misleading.

For example, social media advertising may be very brief and focus only on the potential gains and not on the high risks. You should also be wary of social media influencers who typically receive a financial incentive to market certain cryptoassets and related products and services, so their communications may be biased.

## Fraud And Malicious Activity

There are numerous fake cryptoassets and scams whose sole purpose is to deprive you of your money through the use of various techniques, such as phishing.

## Product complexity

Some products offering exposure to cryptoassets are very complex and sometimes have features that can increase the magnitude of losses if adverse price fluctuations occur. Given their complexity, these products are not suitable for many consumers.

## Lack of Protection

Most cryptoassets and the sale of related products or services are not regulated in most jurisdictions. In these cases, you will not enjoy the rights and protections available to consumers of regulated financial services, such as complaint or redress mechanisms.

## Market Manipulation, Lack of Price Transparency and Poor Liquidity

The pricing of cryptoassets and the execution of transactions on the platforms are often not transparent. In addition, the holding of certain cryptoassets is highly concentrated, which may affect prices or liquidity. Therefore, you may not get a fair price or deal when buying or selling cryptoassets, or you may not be able to sell your cryptoassets as quickly as you would like in the absence of a potential buyer. Market manipulation has been reported on multiple occasions.

## Cyber-attacks, Operational Risks and Security Issues

The distributed ledger technology that underpins cryptoassets carries specific risks. Several cryptoassets issuers and service providers, in particular crypto asset exchanges and e-wallet providers, have suffered cyber-attacks and serious operational problems. Many consumers have lost their cryptoassets or suffered losses due to such attacks and service disruptions or lost the private keys with which they access their assets.

TUPAN  
DRONE

# The next way of cargo transportation between cities and countries

- It is a HSVSTOL unmanned aerial vehicle capable of carrying out multi-mission in the civil fields, operating underlow or at high flight speeds due to its versatile propulsion options—Turbofan, propeller or EDF.
- The proposal of this project aims at a paradigm shift in cargo transport worldwide: today, a service carried out by trucks, trains and ships (cheap, but slow) or planes (fast, but expensive), by a new autonomous air cargo service - TUPAN (fast and cheap).

HSVSTOL –High Speed and Vertical/Short Take-off and Landing  
EDF –Electric Ducted Fan

# TUPAN Aircraft offers solution to the following limitations

**Fixed-Wing:** High autonomy, range and speed, however requires runways to takeoff and landing.

**Helicopter:** Able to hover, however flies at low speed and higher fuel consumption.

**Conventional Drone:** VTOL vehicle, able to hover, however flies at low speed and short range.

TUPAN is an innovative air vehicle for cargo transport:  
HSVSTOL type, high speed and capable of vertical/short take-offs and landings.  
Versatile to fulfill short or long-range cargo missions with low freight.

TUPAN  
DRONE

# Performance advantages

Long range with high load capacity

Lower fuel consumption in cruise flight

High autonomy and speed

HSVSTOL

PatentApplication: PCT/BR2020/050388  
PatentApplication: PCT/BR2022/050152

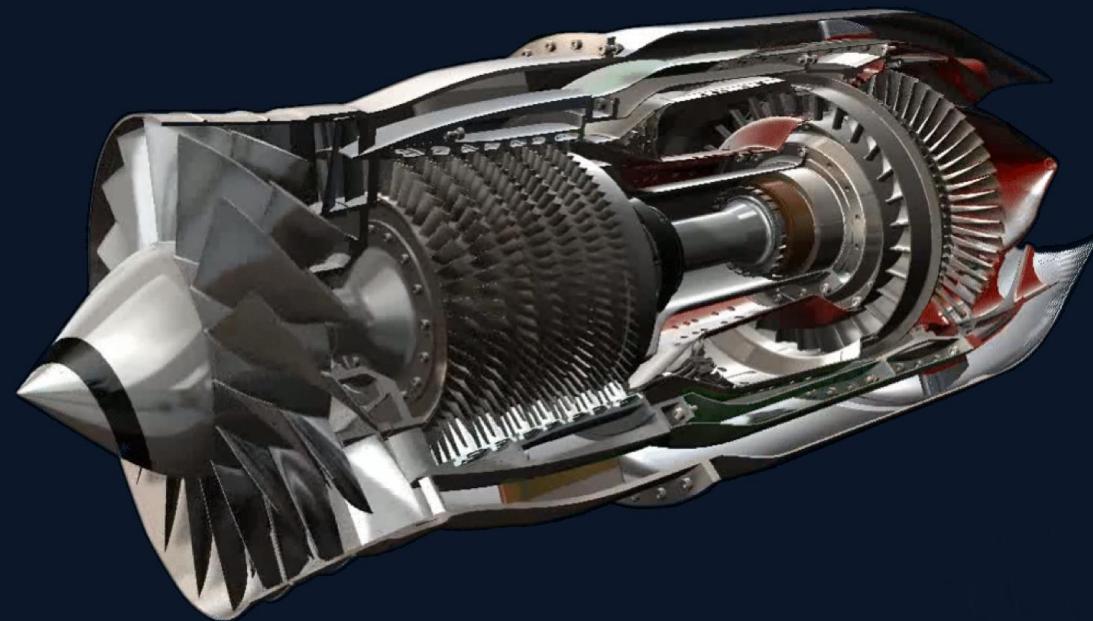

# Tupan Navigation System

# TUPAN PROPULSION TF

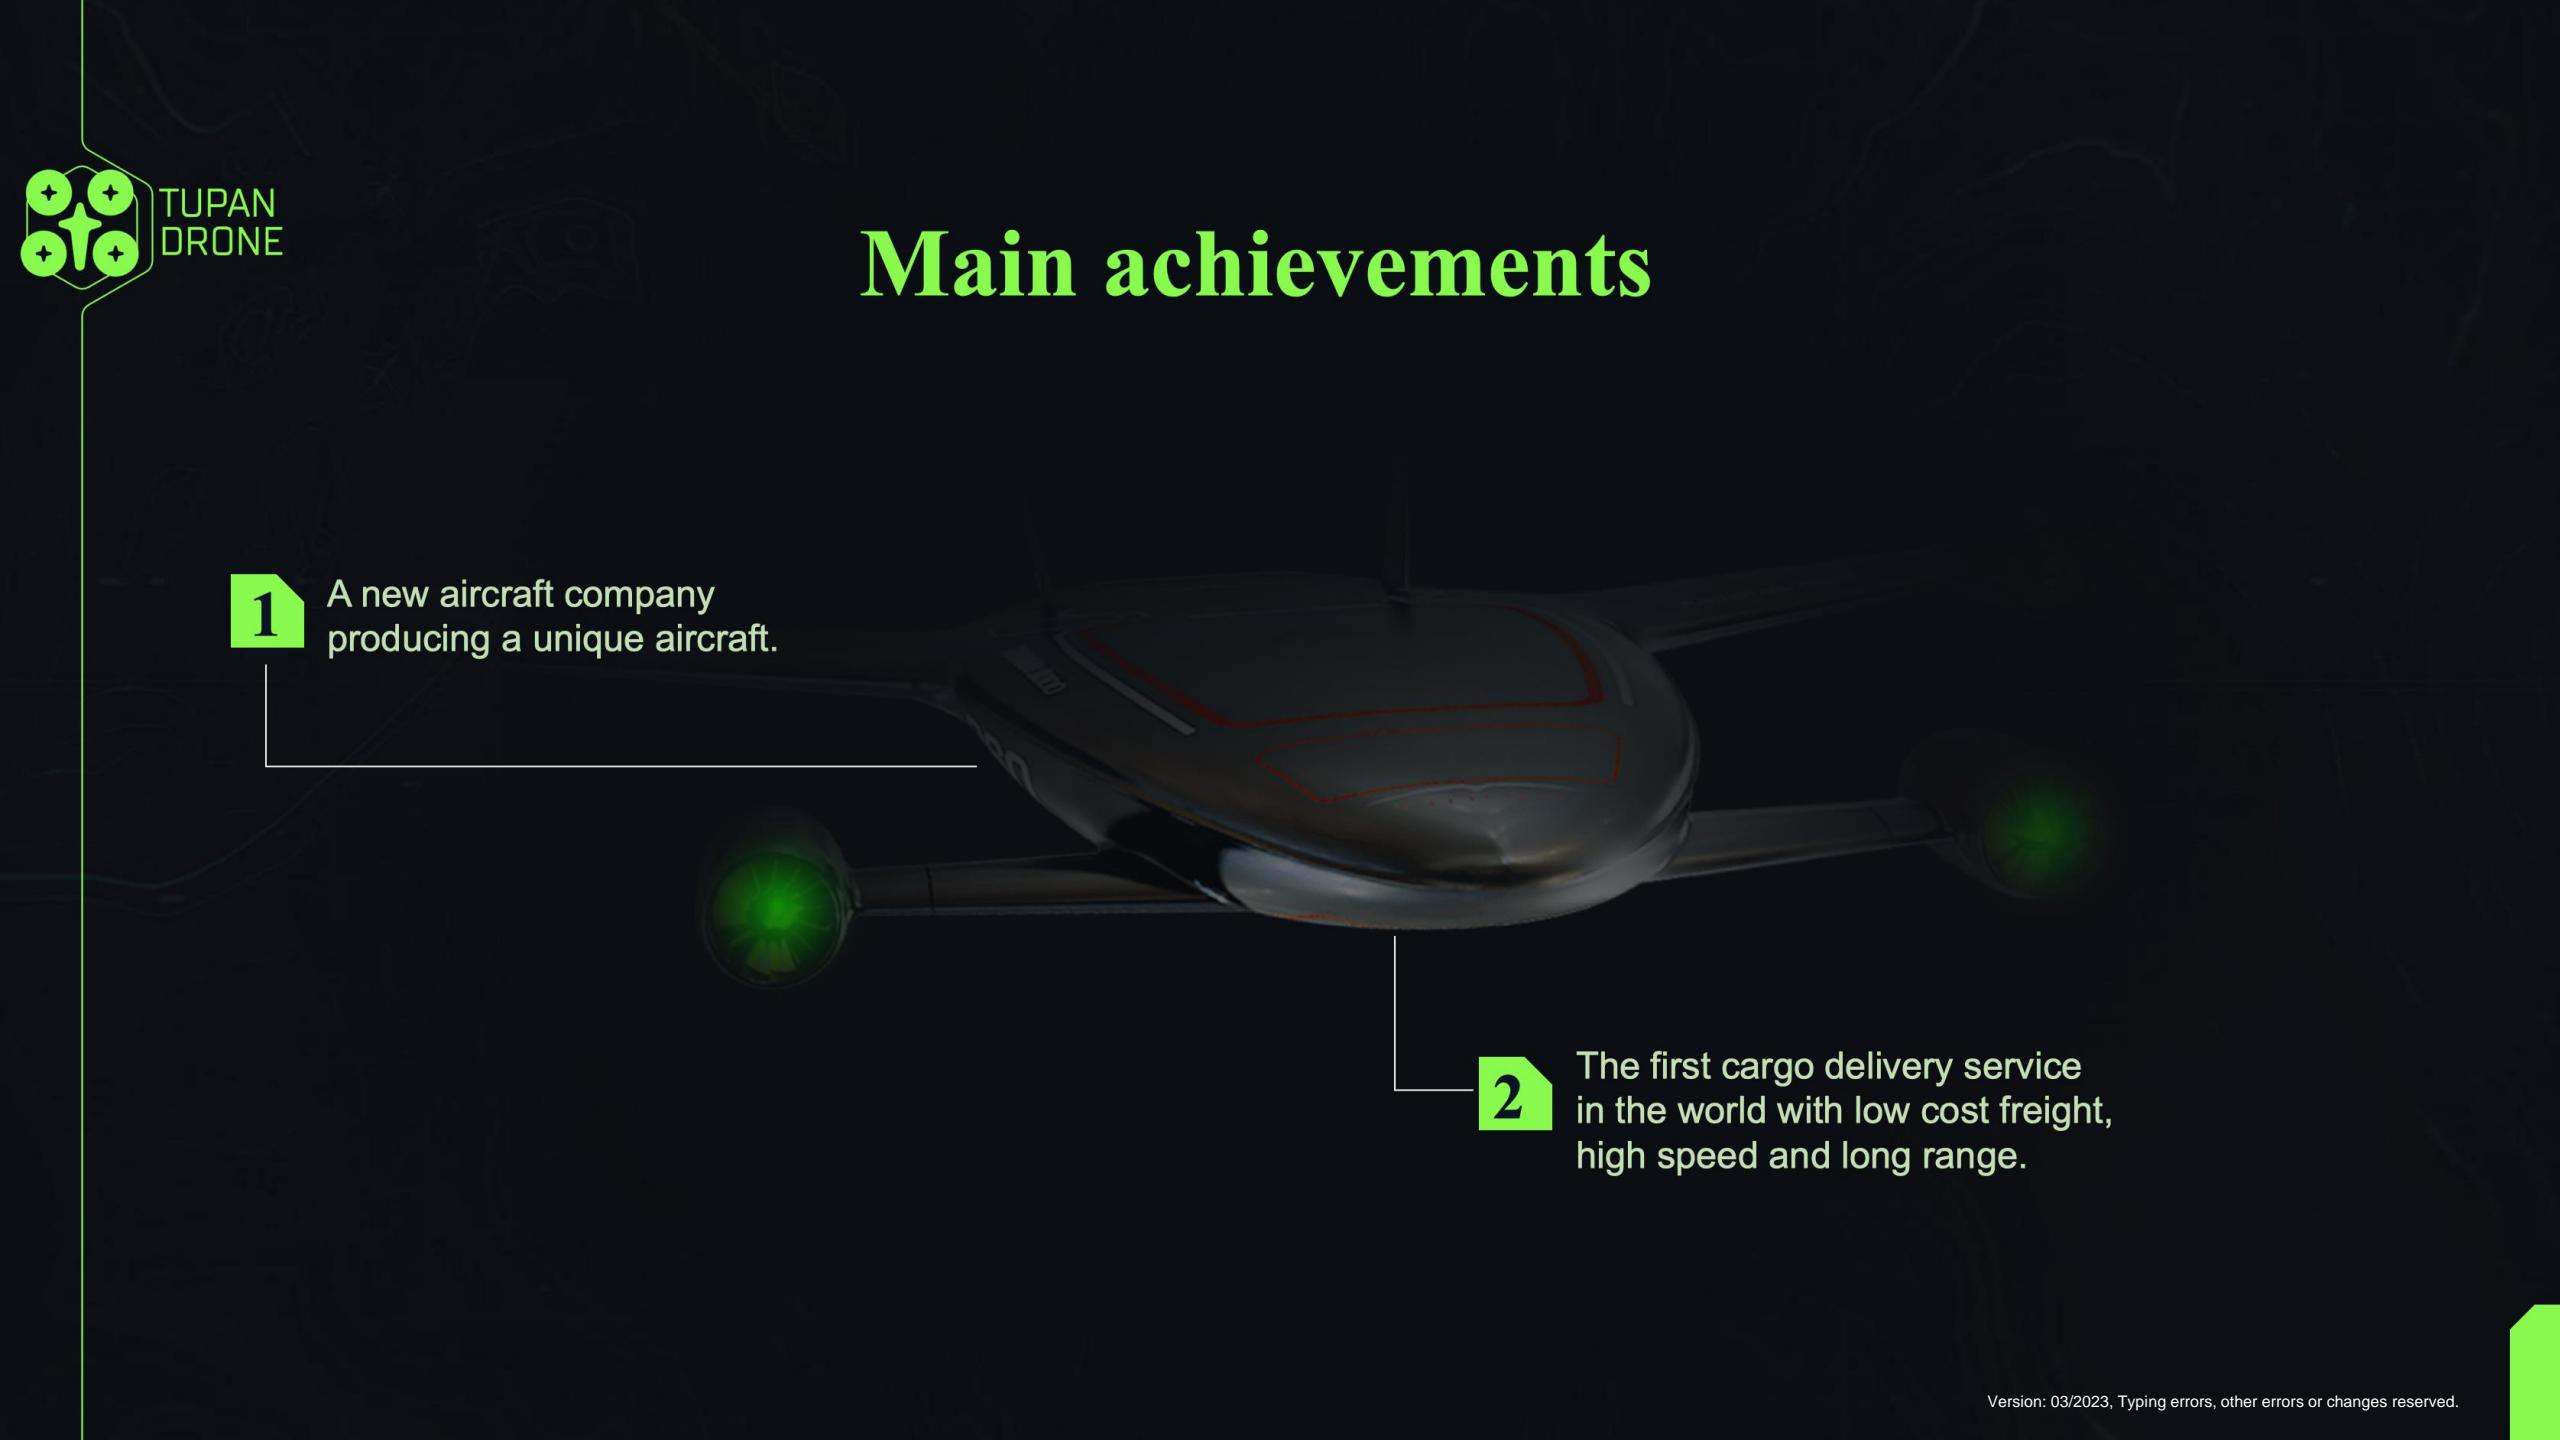

Are a turbofan engine, composed by a fan-compressor rotor driven by a two-turbine stages, and a direct flux annular combustion chamber.

TUPAN  
DRONE

# Main achievements

- 
- 1** A new aircraft company producing a unique aircraft.

- 2** The first cargo delivery service in the world with low cost freight, high speed and long range.

TUPAN  
DRONE

# A new way of Cargo delivery in the WORLD

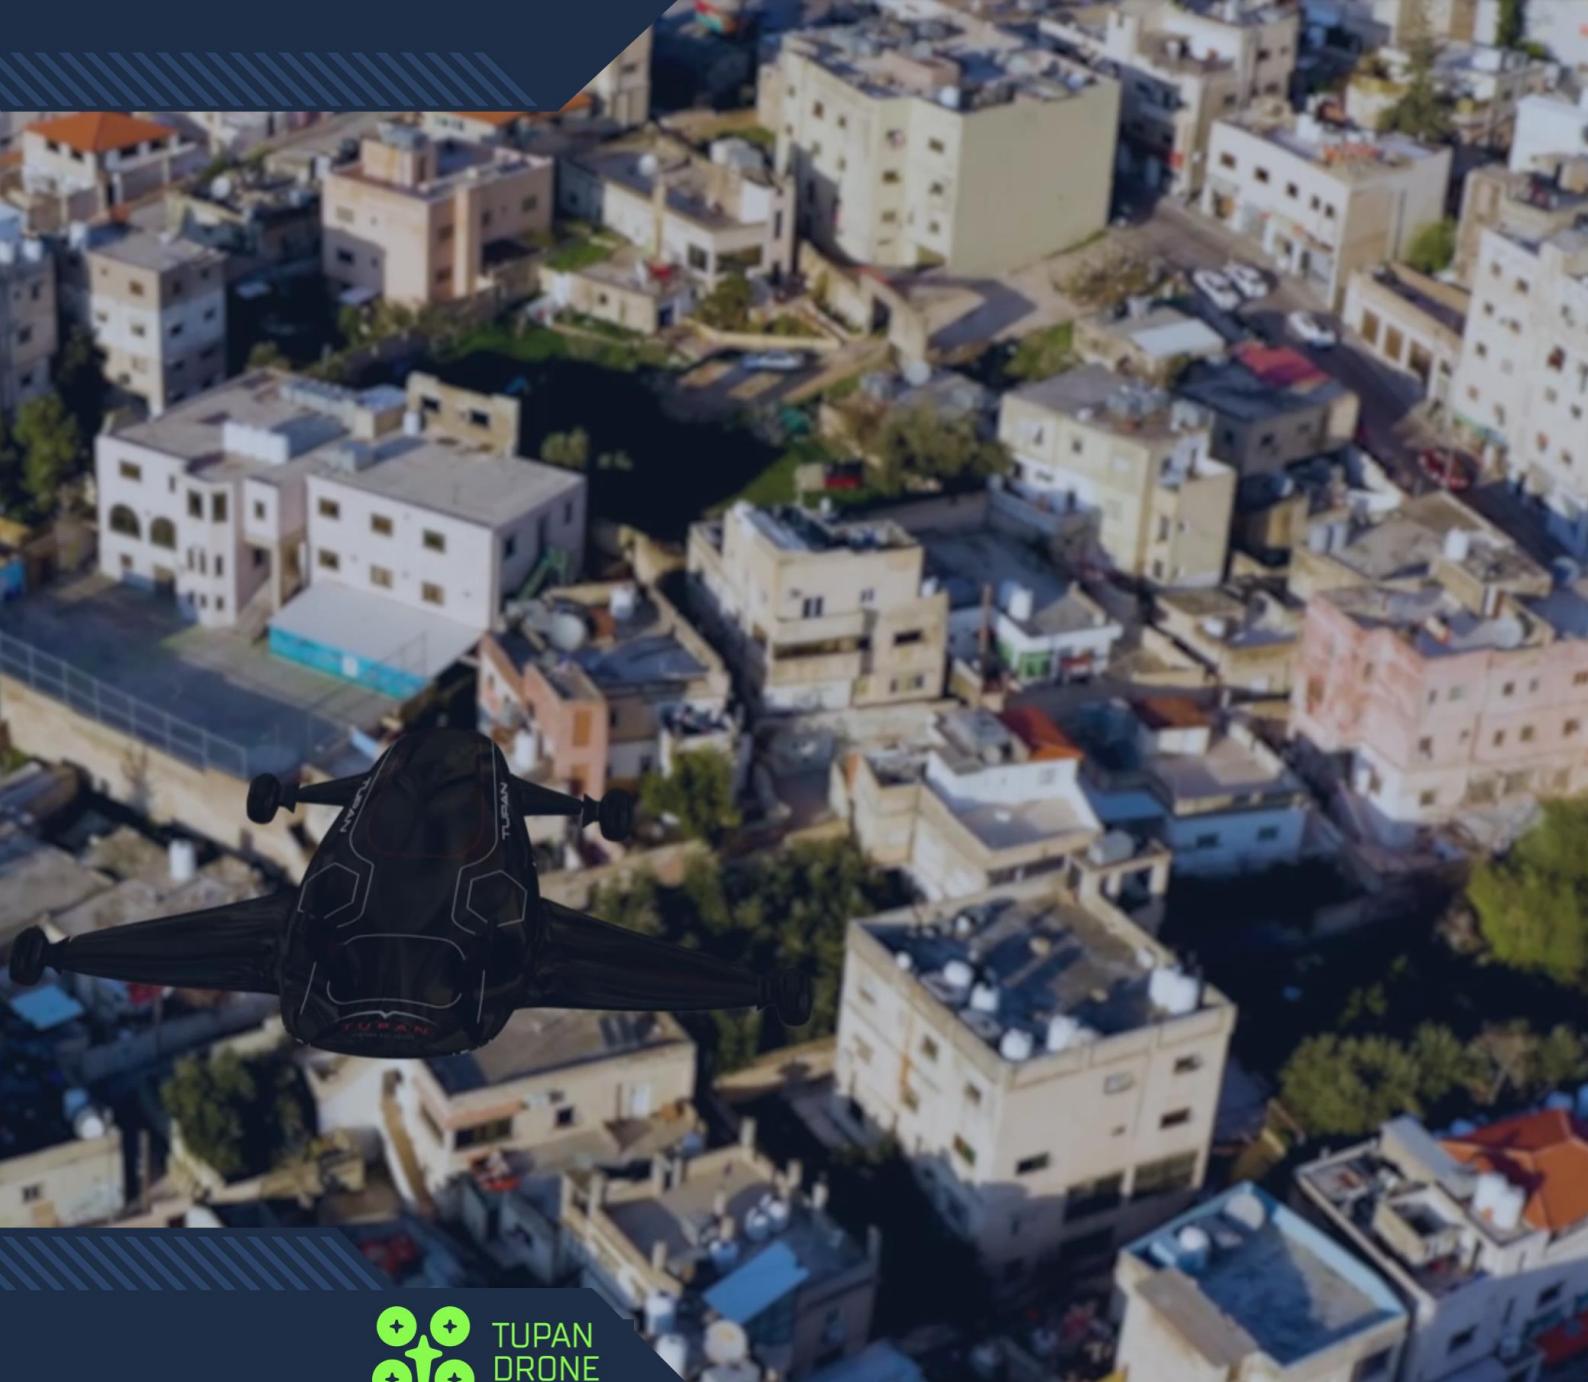

- It's possible only due to the exclusive Turbomachine propulsion system.
- **TUPAN** is the disruptive solution for delivering a wide variety of cargo, in a fast and safely way, operating with less time and cost, when compared to existing solutions on the market.

# Multi-Mission Cargo Aircraft

Due to its versatility the **TUPAN** Family can perform a wide variety of cargo missions such as:

- Medical support
- Shipment of supplies and food
- Border protection
- Cargo Delivery
- Search and rescue
- Fire detection and fire fighting
- Support to oil platforms
- Organs transportation between cities
- Agriculture

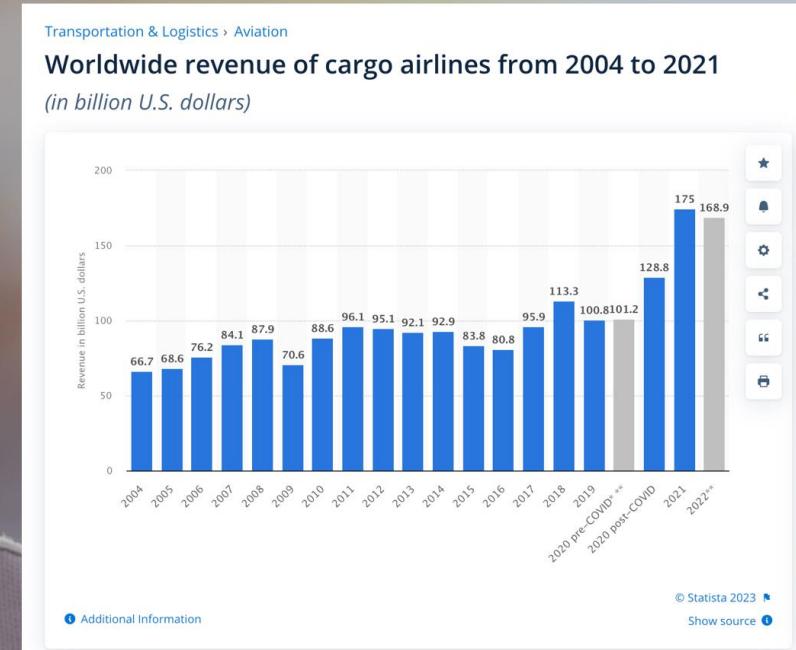

# ENORMOUS POTENTIAL WORLDWIDE

## The drone market

The drone market is expected to grow to **45.8 billion US\$** between 2019 and 2025, a CAGR of 15.5% in the mentioned period\*. The military participation of this market was approximately US\$ 13.55 billion in 2019 and is expected to reach U\$S 26.8 billion in 2025.

Being a recent market, it is still unexplored and the technology options are not yet well defined due to technical barriers. The defense sector, therefore, craves for an aircraft with multi-mission capability, presenting autonomy, high flight speed, VTOL and, above all, low acquisition and maintenance cost, with easy operational management and maintenance.

Just ONE example: CARGO Airlines with a turnover in 2021 of 175 Billion US\$

# Mechanics for the price development of the TDRONE Token

1

A part of the TUPAN AIRCRAFT COMPANY LTDA is indirectly tokenized via an **SPV**. The part owned by the SPV can or will be gradually increased according to the success of the project.

2

The TDRONE token is NOT a stock, but behaves in a similar way.  
Note: Traditionally, with companies of this type such as Apple, Tesla and co., the stock or token value increases overproportionately with an increasing market success.

# Halving overview

## TDRONE Minting

The entire TDRONE Minting process takes place on the ZENIQ Smart Chain, which can be viewed transparently at any time at the web address: <https://smart.zeniq.net>

**Time Halving:** from the activation date of the TDRONE masternode every year (for example: from the 10th of february to the next 10th of february) 50% less minted TDRONE tokens /day.

**Sales Halving:** with each purchased add-on TDRONE masternode, the minting factor is reduced. As a point of reference, the minting factor is reduced by around 1% for every 2,000 masternodes according to the algorithm.

Maximum supply, based on the maximum available number of TDRONE masternodes of 1.5 million nodes, will be around 10 billion TDRONE tokens.

# Tokenomics

The company is valued based on market capitalization. Due to the enormous potential of the product and thus of the company, a massive increase in the company's value can be assumed.

The increase in the value of the company

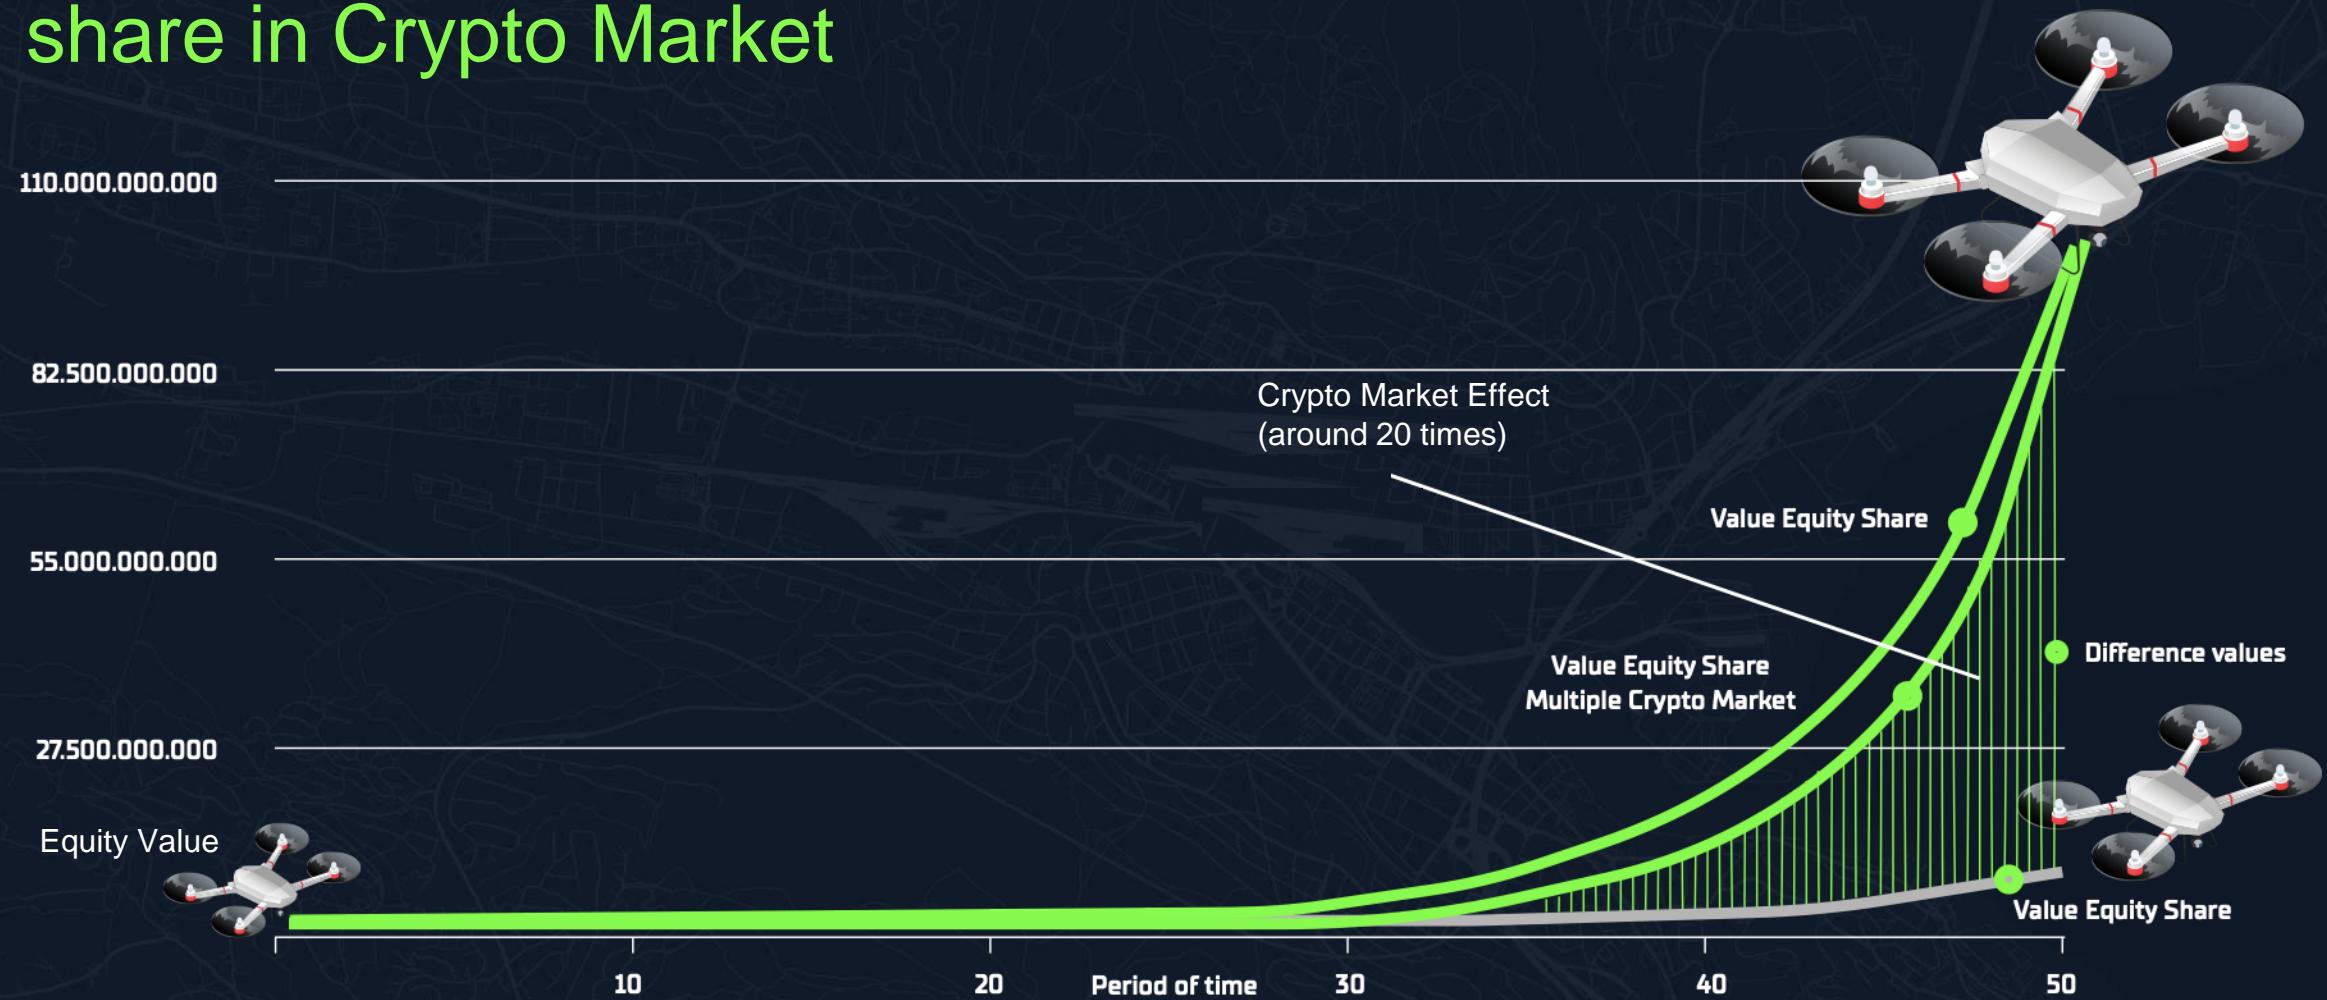

- is faster or is larger / higher than the number of additionally minted tokens. This means that the price/value of the token is continuously increasing, although!!\* More and more tokens are being minted.

The buyers who acquire the HUBS with the highest minting performance benefit disproportionately compared to the buyers of HUBS with an already reduced performance.

Nevertheless, everyone benefits from the increase in value of the company in the long term, even if no more new tokens are minted, since the price of the token depends on the company's valuation and thus does not just represent a trading value.

\*Token price developments on the crypto market are additionally based on sell and buy activities of market participants on exchanges

# Development value of equity share in Crypto Market
